CMM

A Company

How mature a Company and does the company follow the SDLC, these can be measure by CMM (Capability Maturity Model). CMM fully depend on SDLC, There are five level of CMM. Each level has its own process. Through these levels we can understand how mature a Company is. Now, the five levels are -

Level 1: Initial

A new company with new investment, or does not follow the SDLC, disorganized, less team, depend on 1 person these type of status defined the level 1.

Ex: All member of the company depend on 1 developer.

Level 2: Repeatable:

A company ~~start~~ started to follow the SDLC, grow up their team members, try to maintain or organize the company this status in level 2.

Ex: Follow SDLC (existing) and develop ^{software} with a proper team.

Level 3: Defined

In this level, a company now develop their own SDLC, coding style to build a software. Through this level we can defined a company by good maturity.

Ex: Company follow their own SDLC, documentation, coding and build software.

Level 4: Managed:

Here a company now monitor and control their own SDLC and other process. For these they need data. By analyzing these data they can maintain monitor or control it.

Ex: How much accurate and beneficial the company's SDLC to find out the result they need the feedback data from the client.

Level 5: Optimizing

This is the continuous process. Here by maintaining the building process the company continuously improve and optimize their own process for more better output.

Ex: The company try to add more process to build or give good service with their own process.
