3. PROBLEM DOMAIN

3.1 Background to the Problem

Bangladesh has a vibrant event culture with frequent celebrations including weddings, birthdays, corporate events, religious ceremonies, and social gatherings. The event decoration industry plays a crucial role in making these occasions memorable. However, the current market operates primarily through informal channels, creating significant challenges for both service seekers and providers.

At present, most individuals and organizations seeking decoration services rely on Facebook pages, personal phone calls, and word-of-mouth recommendations. While these methods have served the community for years, they lack structure and efficiency. Clients often struggle to find reliable decorators, compare prices transparently, or verify the quality of services before making commitments. This informal system makes it difficult to assess whether they are receiving fair pricing or being overcharged.

The absence of a centralized platform creates several critical problems. First, there is no price transparency—clients have no standardized way to compare quotations from multiple decorators, leading to potential exploitation. Second, trust remains a major concern as fake or unverified service providers can easily deceive customers through social media without accountability. Third, the entire process is inefficient and time-consuming, requiring clients to individually contact multiple decorators, explain their requirements repeatedly, and wait for responses that may never come.

Moreover, small and medium-sized decoration firms which are legitimate do not have the chance to reach potential clients outside of their own network. They are not visible in the

competitive market and are not able to present their portfolios to more people. These problems make clear the necessity of a digital solution that would introduce structure, transparency, and trust to event decoration business in Bangladesh and help the local businesses and consumers make better choices.

3.2 Solution to the Problem

The proposed web-based Event Decoration Service Marketplace directly addresses these challenges by creating a structured, transparent, and efficient digital platform. This system connects clients needing decoration services with professional decorators through a centralized interface. The platform's core functionality revolves around requirement posting and quotation submission, where clients post detailed event requirements and decorators submit competitive quotations with pricing breakdowns and portfolio samples. This creates a transparent marketplace where multiple decorators compete fairly, naturally driving prices to reasonable levels while ensuring quality service delivery.

Business Feasibility: The Event Decoration Service platform demonstrates strong financial and operational feasibility within Bangladesh's market context. The web-based platform requires minimal initial investment, utilizing open-source technologies and local development talent to reduce costs. Hosting expenses scale gradually with user growth, making it financially sustainable. Bangladesh's rising internet penetration and smartphone usage ensure technical accessibility. The market shows consistent demand through thousands of annual events like weddings, birthdays, corporate functions, and cultural celebrations creating year-round revenue opportunities. The platform particularly supports small and medium-sized decoration enterprises, enabling talented local decorators to compete based on merit rather than marketing budgets, thereby formalizing the informal sector and contributing to economic growth.

Software Description and Purpose: The Event Decoration Service platform is a web based application that links organizers of events with professional event decoration service providers in Bangladesh. It is used by three groups of users, including clients who leave their requirements, decorators who leave their quotations, and administrators who maintain the integrity of the platform. The primary aim is to make the informal and fragmented market of the decoration industry a structured, reliable digital ecosystem using price transparency, efficient matching, and verification systems. It is fully online, with no installations and deals with the full service procurement cycle; from requirement posting to the decorator selection as well as the post-service reviews, which is a viable example of a digital transformation initiative in the Bangladesh event decoration sector.

These objectives collectively establish a trustworthy, efficient, and equitable marketplace benefiting all stakeholders. The platform advances Bangladesh's digital economy while empowering consumers with transparent choices and decorators with expanded business opportunities, creating sustainable value for the entire event decoration ecosystem.

Problem-Solution Analysis	
Key Problems Identified	EventDecor Solution
Lack of Price Transparency Clients cannot compare prices easily. Decorators may overcharge without market reference. No standardized quotation format exists, making comparison impossible.	Structured Quotation System Multiple decorators submit detailed quotations for the same requirement. Standardized format allows direct comparison. Real-time competitive pricing ensures fair market rates.
Trust and Authenticity Issues Fake decorators operate on social media without verification. No accountability mechanism exists. Clients risk losing money to fraudulent providers.	Verification and Rating System Admin checks credentials of decorators and approves them. Reputation scores are generated through user reviews and ratings. The bad actors are eliminated by the complaint handling mechanism.
Inefficient Service Discovery Clients manually search for best decorator. Time-consuming process of contacting decorators individually. No centralized database of available service providers.	Centralized Marketplace Single platform hosts all verified decorators. Requirement posting allows decorators to find clients. Search and filter features streamline discovery, offering better efficiency.
Limited Decorator Visibility Small businesses struggle to reach customers beyond their network. No professional platform to showcase portfolios. Marketing limited to personal connections and local advertising.	Digital Portfolio and Profile Each decorator maintains a professional profile with portfolio. Requirements reach all registered decorators equally. Fair exposure for SMEs competing with established businesses.
Poor Communication Management Random chats on phone, messages and social media. No history of agreements or discussions. Hard to keep track of several decorator interactions at once.	Integrated Communication System All the quotation, messages, and agreements in a single platform. All interaction history available at any time. Structured communication channels on a requirement basis.
No Service Quality Feedback No way to check the quality of work of the decorator in advance. Clients rely on verbal	Review and Portfolio System Verified client reviews with photo evidence. Decorator portfolios showcase completed

commitments only. Previous work that is hard to authenticate.	projects. Rating system reflects service quality history.
No Complaint Resolution System There is no official method of reporting any service disputes, fraud, or dissatisfaction currently, which leaves unsettled conflicts and lowered trust in event decoration services.	Admin Moderation and Complaint Handling The system offers a complaint management process that is under the control of the administration whereby reported cases are reviewed, investigated and resolved by giving warnings, suspending accounts or taking corrective measures to enhance fairness and reliability of the platforms.

Key Benefits and Objectives:

Enhanced Pricing Transparency

The system enables clients to view and compare multiple service quotations in a structured format, reducing pricing ambiguity and preventing unfair or inconsistent charges.

Fair and Open Competition

Decorators of all business sizes are given equal opportunities to compete based on service quality, pricing, and customer feedback rather than informal influence.

Simplified Event Planning Process

The platform minimizes the time and effort required to search for decorators, collect quotations, and finalize service providers through a centralized digital process.

Formalization of Informal Service Businesses

The system supports the digital transformation of traditionally informal decoration services by providing structured profiles, digital portfolios, and transparent transaction processes.

Service Quality Improvement and Monitoring

A structured review and rating process enables continuous monitoring of service quality and encourages responsible behavior from decorators.

Key Gaps Addressed:

The platform will address several critical gaps in current solutions:

Information Accessibility Gap

The system provides clear and verified decorator profiles, allowing clients to easily understand available services before making a decision.

Trust and Credibility Gap

Decorator verification by the admin and user reviews help reduce fake services and build trust between clients and service providers.

Communication Efficiency Gap

The platform offers a centralized communication system, reducing the need for phone calls and social media messages and ensuring smooth and organized interaction.

Service Comparison Gap

A structured quotation system enables clients to compare different decorators based on price, services offered, and overall value.

Operational Management Gap

Admin monitoring and complaint handling features help maintain platform discipline and ensure fair resolution of issues.

4. REQUIREMENT SPECIFICATION

4.1 System Features (Client Features)

Epic no	Epic	Feature no	Feature	Functional Requirements	Description
4.1.1	Client Account Management	4.1.1.1	Registration	1. The system shall allow customers to register by providing full name, email address, phone number, password, and delivery address. 2. The system shall validate that the email address or phone number is unique before account creation. 3. The system shall verify the customer's email address or phone number before activating the account. 4. The system shall enforce password security requirements during registration. 5. The system shall securely store customer registration information in the database.	Enables new clients to create secure accounts with verified contact information for accessing platform services.

4.1.1		4.1.1.2	Login	1. The system shall authenticate customers using a registered email address or phone number and password. 2. The system shall validate customer credentials before granting access. 3. The system shall temporarily lock the customer account after 5 consecutive failed login attempts. 4. The system shall display an error message for invalid login credentials. 5. The system shall create a secure session after successful authentication.	Provides secure and convenient access to client accounts while preventing unauthorized access.
		4.1.1.3	Forgot Password	1. The system shall allow customers to reset their password using email verification or SMS OTP verification. 2. The system shall verify the customer's identity before allowing password reset.	Ensures secure password recovery process while protecting accounts from unauthorized reset attempts

				3. The system shall enforce strong password requirements during the password reset process. 4. The system shall expire password reset tokens or OTPs after 24 hours. 5. The system shall notify customers after a successful password change.	
		4.1.1.4	Profile Management	1. The system shall allow customers to update personal information including full name, email address, phone number, and delivery location. 2. The system shall allow customers to upload, update, or remove profile pictures. 3. The system shall allow customers to change their password by providing the current password. 4. The system shall	Enables clients to maintain accurate and current account information for better service delivery.

				validate all profile information before saving changes. 5. The system shall notify customers after successful profile updates.	
4.1.2	Client Requirement Management	4.1.2.1	Create Requirement	1. The system shall provide a requirement submission form containing fields for event type, event date, location, budget range, and requirement description. 2. The system shall allow customers to add optional details including guest count, theme preferences, color preferences, and reference images. 3. The system shall validate all mandatory fields before requirement submission. 4. The system shall generate a unique requirement ID for each submitted requirement. 5. The system shall automatically	Allows clients to post detailed event decoration requirements that decorators can view and quote on.

4.1.2				assign a timestamp and set the requirement status as “Active” upon successful creation. 6. The system shall securely store all requirement information in the database.	
		4.1.2.2	View Requirements	1. The system shall display all customer-posted requirements in a dashboard view. 2. The system shall display the current status of each requirement, including Active, Closed, and Fulfilled. 3. The system shall display the total number of quotations received for each requirement. 4. The system shall allow customers to sort requirements by event date, status, or event type. 5. The system shall allow customers to view detailed information for	Provides clients with organized overview of all their requirement postings and their current status.

				each requirement posting.	
		4.1.2.3	Edit Requirement	1. The system shall allow customers to edit requirement details before any quotation is submitted. 2. The system shall restrict editing of requirements that have already received quotations. 3. The system shall update the modification timestamp whenever a requirement is edited. 4. The system shall validate updated requirement information before saving changes. 5. The system shall notify interested decorators about significant requirement changes.	Enables clients to correct or update requirement information while maintaining quotation integrity.
		4.1.2.4	Delete/Close Requirement	1. The system shall allow clients to delete requirements that have no quotations.	Allows clients to manage requirements lifecycle and inform

				2. The system shall allow marking requirements as "Closed" when no longer needed. 3. The system shall require confirmation before deletion or closure. 4. The system shall notify decorators who submitted quotations when requirements are closed.	decorators when opportunities are no longer available.
4.1.3	Quotation Management	4.1.3.1	Receive Quotations	1. The system shall notify clients via email/SMS when new quotations are submitted. 2. The system shall display quotation count on requirement dashboard. 3. The system shall allow clients to view quotation submission timestamp. 4. The system shall maintain quotation order by submission date.	Keeps clients informed when decorators submit quotations for their requirements.
		4.1.3.2	View Quotation Details	1. The system shall display complete quotation information including decorator	Provides clients with comprehensive quotation information

4.1.3				name, total price, itemized breakdown, and services included. 2. The system shall show quotation validity period and terms. 3. The system shall provide link to decorator profile from quotation view. 4. The system shall display decorator's message or additional notes.	for informed decision-making.
		4.1.3.3	Compare Quotations	1. The system shall provide side-by-side comparison view for multiple quotations. 2. The system shall highlight price differences and service variations. 3. The system shall display decorator ratings and experience alongside quotations. 4. The system shall allow sorting quotations by price, rating, or submission date.	Enables clients to easily compare multiple quotations and identify best value options.

		4.1.3.4	Select Decorator	1. The system shall allow customers to select a preferred quotation through a confirmation process. 2. The system shall generate a booking confirmation containing the agreed terms, pricing, and event details. 3. The system shall notify the selected decorator immediately after confirmation. 4. The system shall provide the selected decorator's contact information to the customer after successful booking confirmation. 5. The system shall update the requirement status to "Booked" after decorator selection.	Formalizes decorator selection and initiates service agreement between client and decorator.
4.1.4	Decorator Discovery	4.1.4.1	Browse Decorators	1. The system shall display list of all verified decorators with basic information. 2. The system shall show decorator profile	Allows clients to explore available decorators independently beyond quotation responses.

4.1.4				cards with ratings, location, and specialization. 3. The system shall provide pagination for large decorator lists. 4. The system shall display "Verified" badge for approved decorators.	
		4.1.4.2	Search and Filter	1. The system shall provide search functionality by decorator name or business name. 2. The system shall offer filters for location, event type, price range, and rating. 3. The system shall apply multiple filters simultaneously. 4. The system shall display search result count and update results dynamically.	Helps clients find decorators matching specific criteria and preferences efficiently.
		4.1.4.3	View Decorator Profile	1. The system shall display complete decorator profile including business details, experience, and services. 2. The system shall show decorator portfolio	Provides comprehensive decorator information for evaluating quality and suitability.

				organized by event type. 3. The system shall display all client reviews and overall rating. 4. The system shall show decorator's service area coverage and contact information (limited until selection).	
		4.1.4.4	Payment Processing	1. The system shall support secure local payment methods including debit/credit cards, bKash, Nagad, and Rocket. 2. The system shall support secure international payment gateways for international customers. 3. The system shall encrypt and securely process all payment transactions. 4. The system shall generate payment receipts and transaction confirmations after successful payment completion.	Provides secure and convenient payment options for all customers

				5. The system shall store payment transaction records for future reference and auditing purposes. 6. The system shall notify customers in case of payment success or failure.	
4.1.5	Communication	4.1.5.1	Send Messages	1. The system shall provide messaging interface to communicate with decorators who submitted quotations. 2. The system shall link messages to specific requirements and quotations for context. 3. The system shall timestamp all messages automatically. 4. The system shall support text messages up to 1000 characters.	Client can direct communicate with service provider.
		4.1.5.2	View Conversations	1. The system shall organize messages by requirement and decorator. 2. The system shall display conversation threads in chronological order. 3. The system shall	Provides organized view of all message for easy reference and tracking

				show decorator information in conversation header. 4. The system shall allow searching within conversation history.	
4.1.6	Review and Ratings	4.1.6.1	Submit Review	1. The system shall allow clients to submit reviews only for decorators they selected and worked with. 2. The system shall require star rating (1-5) and written feedback. 3. The system shall enable photo uploads of completed decoration work. 5. The system shall prevent duplicate reviews for same service booking.	Enables clients to share experiences and help future clients make informed decisions.
		4.1.6.2	Edit Review	1. The system shall allow clients to edit their submitted reviews within 7 days of posting. 2. The system shall maintain review edit history for transparency. 3. The system shall notify decorator of review edits.	Allows clients to correct or update reviews while maintaining transparency

				4. The system shall display "Edited" label on modified reviews.	
4.1.7	Notifications	4.1.7.1	Receive Notifications	1. The system shall send real-time notifications 2. The system shall deliver notifications via in-app, email or SMS based on preferences. 3. The system shall display notification badge count for unread items. 4. The system shall maintain notification history accessible from dashboard.	Keeps clients informed of important platform activities and upcoming events.
		4.1.7.2	Manage Preferences	1. The system shall allow clients to configure notification preferences by type and channel. 2. The system shall enable disabling specific notification categories. 3. The system shall save preference changes immediately.	Gives clients control over how and when they receive platform notifications.

4.2 System Features (Decorator Features)

Epic no	Epic	Feature no	Feature	Functional Requirements	Description
4.2.1	Decorator Account Management	4.2.1.1	Decorator Registration	1. The system shall allow decorators to register by providing business name, owner name, email address, phone number, service areas, and password. 2. The system shall require decorators to upload verification documents, including business registration certificate, national ID, and portfolio samples. 3. The system shall verify the decorator's email address or phone number using OTP verification. 4. The system shall set the decorator account status to "Pending Verification" until administrative approval is completed.	Enables decorators to create accounts and submit required verification documents for approval.

4.2.1				5. The system shall securely store all registration and verification data in the database.	
		4.2.1.2	Decorator Login	1. The system shall authenticate decorators using a registered email address or phone number and password. 2. The system shall create and maintain a secure session upon successful authentication. 3. The system shall temporarily lock the decorator account after 5 consecutive failed login attempts. 4. The system shall display the decorator's account verification status immediately after successful login. 5. The system shall restrict access to platform features if the decorator account status is "Pending	Provides secure access to decorator accounts while showing verification status clearly.

				Verification” or “Rejected.”	
		4.2.1.3	Password Recovery	1. The system shall allow decorators to reset their password using email verification or SMS OTP verification. 2. The system shall verify the decorator’s identity before allowing password reset. 3. The system shall enforce strong password policies during the password reset process. 4. The system shall expire password reset tokens or OTPs after a predefined time period 5. The system shall notify decorators after a successful password change.	Ensures secure password recovery process for decorator accounts.
		4.2.1.4	Profile Setup	1. The system shall provide profile creation form for business description,	Allows decorators to create comprehensive business

				services offered, years in business, team size, and specializations. 2. The system shall allow setting service area coverage with specific locations. 3. The system shall enable pricing range indicator selection 4. The system shall validate all profile information before saving.	profiles that clients can view.
4.2.2	Portfolio Management	4.2.2.1	Setup Portfolio	1. The system shall allow decorators to upload project images (JPEG, PNG formats, max 5MB each). 2. The system shall require categorizing images by event type (wedding, birthday, corporate, etc.). 3. The system shall allow adding captions and project descriptions to images. 4. The system shall support bulk image uploads. 5. The system shall generate thumbnails	Enables decorators to showcase their past work and attract clients with visual portfolios.

				automatically for gallery display.	
4.2.3	Requirement Discovery	4.2.3.1	Browse Requirements	1. The system shall display all active client requirements to verified decorators. 2. The system shall show requirement cards with event type, location, date, and budget range. 3. The system shall display requirement posting date and quotation deadline if applicable. 4. The system shall provide pagination for large requirement lists.	Allows decorators to discover client requirements they can potentially fulfill.
		4.2.3.2	Search and Filter Requirements	1. The system shall provide search functionality by event type or location. 2. The system shall offer filters for event date range, budget range, location proximity, and posting date. 3. The system shall apply multiple filters simultaneously.	Helps decorators efficiently find requirements matching their expertise and availability.

				4. The system shall save filter preferences for future sessions. 5. The system shall display filtered result count.	
		4.2.3.3	View Requirement Details	1. The system shall display complete requirement details including all client specifications. 2. The system shall display the client's location and event venue details. 3. The system shall display the number of quotations submitted by other decorators for the same requirement. 4. The system shall display the current requirement status and remaining validity period. 5. The system shall ensure that only verified and approved decorators can	Provides decorators with comprehensive information needed to prepare accurate quotations.

				access requirement details.	
4.2.4	Quotation Management	4.2.4.1	Create Quotation	1. The system shall provide a quotation form with fields for total price, itemized breakdown, service description, timeline, and terms & conditions. 2. The system shall allow decorators to add custom line items with individual prices. 3. The system shall automatically calculate the total quotation amount based on line items. 4. The system shall require decorators to set a quotation validity period within a defined range (e.g., 7–30 days). 5. The system shall allow decorators to include a personalized message for the	Enables decorators to create detailed, professional quotations for client requirements.

				customer. 6. The system shall allow decorators to save quotations as drafts before submission. 7. The system shall set quotation status to “Submitted” upon successful submission.	
		4.2.4.2	Edit Quotation	1. The system shall allow decorators to edit a quotation only if it has not been viewed by the customer. 2. The system shall restrict editing of quotations after the customer has viewed them. 3. The system shall maintain a version history for all quotation updates. 4. The system shall update the modification timestamp whenever a quotation is edited.	Allows decorators to correct quotation errors while maintaining integrity after client viewing

				5. The system shall validate all edited quotation data before saving changes.	
		4.2.4.3	Withdraw Quotation	1. The system shall allow decorators to withdraw submitted quotations only before the customer selects a quotation. 2. The system shall require decorators to provide a confirmation and a reason before withdrawing a quotation. 3. The system shall notify the customer immediately when a quotation is withdrawn. 4. The system shall mark withdrawn quotations in the decorator's quotation history. 5. The system shall update the quotation status to "Withdrawn" upon	Enables decorators to remove quotations when unable to fulfill requirements.

				successful withdrawal.	
4.2.5	Service Packages	4.2.5.1	Create Service Packages	1. The system shall allow creating predefined service packages with package name, description, and fixed pricing. 2. The system shall enable listing included decoration items and services in packages. 3. The system shall allow adding portfolio images to showcase package examples. 4. The system shall support multiple packages for different event types.	Allows decorators to offer standardized packages for common client requirements.
4.2.6	Communication	4.2.6.1	View Conversations	1. The system shall organize conversations based on requirement and customer. 2. The system shall display conversation messages in chronological order. 3. The system shall display	Provides organized communication view for managing multiple client interactions.

				customer information in the conversation header. 4. The system shall allow decorators to view all active and past conversations associated with their assigned requirements.	
4.2.7	Notifications	4.2.7.1	Receive Notifications	1. The system shall send real-time notifications for new requirements matching service area, quotation views by clients, messages from clients, and booking confirmations. 2. The system shall deliver notifications via in-app, email, and SMS based on preferences. 3. The system shall display notification badge count for unread items. 4. The system shall maintain notification history.	Keeps decorators informed of opportunities and client interactions in real-time.

4.3 System Features (Admin Features)

Epic no	Epic	Feature no	Feature	Functional Requirements	Description
4.3.1	Admin Account Management	4.3.1.1	Admin Authentication	1. The system shall provide secure admin authentication using email address and password. 2. The system shall require two-factor authentication (2FA) for all admin accounts during login. 3. The system shall temporarily lock admin accounts after 3 consecutive failed login attempts. 4. The system shall log all admin login activities including IP address, timestamp, and login status (success/failure). 5. The system shall maintain an audit trail of all admin authentication attempts.	Ensures high security for admin accounts with enhanced authentication measures.
		4.3.1.2	Admin Role Management	1. The system shall support multiple admin roles including Super Admin, Moderator,	Provides flexible admin team structure with appropriate

				and Support Staff, each with predefined access permissions. 2. The system shall allow Super Admins to create, modify, activate, or deactivate admin accounts. 3. The system shall define role-based permission levels including view, create, edit, delete, and approve operations. 4. The system shall enforce access control based on assigned roles and permissions. 5. The system shall log all role assignments and permission changes with timestamp, admin ID, and action details.	access controls.
4.3.2	User Moderation	4.3.2.1	Client Management	1. The system shall display list of all registered clients with registration date, location, and activity status also their details. 2. The system shall allow admins to edit user contact	Maintains platform quality through effective Client management

				information and profile details when requested. 3. The system shall allow admins to temporarily suspend user accounts for policy violations. 4. The system shall allow admins to initiate password reset for users upon verified request.	
		4.3.2.2	Decorator Management	1. The system shall display all pending decorator registration applications with all details in verification queue 2. The system shall display all uploaded verification documents (business certificate, ID, portfolio) 3. The system shall allow admins to approve/reject decorator applications after verification. 4. The system shall allow admins to request additional documentation or	Ensures safe and trustworthy experience for service provider.

				clarification from applicants. 5. The system shall allow admins to suspend decorator accounts for policy violations or complaint investigations.	
4.3.4	Content Moderation	4.3.4.1	Manage Requirements	1. The system shall display all posted customer requirements for administrative review. 2. The system shall display detailed requirement information including all customer inputs and attached files. 3. The system shall allow administrators to flag, approve, or reject requirements based on policy compliance. 4. The system shall allow administrators to request modification from customers instead of directly editing requirement content. 5. The system shall	Maintains high-quality requirements.

				maintain a moderation log for all administrative actions performed on requirements.	
		4.3.4.2	Manage Quotations	1. The system shall display all submitted quotations for administrative oversight. 2. The system shall display complete quotation details including pricing breakdown, service description, timeline, and terms & conditions. 3. The system shall allow administrators to flag or mark quotations as suspicious or non-compliant. 4. The system shall allow administrators to hide or deactivate quotations that violate platform policies. 5. The system shall maintain an audit log of all administrative actions performed on quotations.	Allows admins to maintain quotation integrity and protect clients from scams.

4.3.5	Complaint and Dispute Resolution	4.3.5.1	Manage Complaints	1. The system shall display all filed complaints in organized dashboard view. 2. The system shall display complete complaint information including description and supporting evidence. 3. The system shall provide messaging interface for admins to communicate with complainant and accused party. 4. The system shall allow implementing enforcement actions (warnings, account suspensions, verification revocation) directly from complaint resolution.	Provides admins with comprehensive overview of all platform complaints and take action for rules violation.
4.3.6	Platform Analytics	4.3.6.1	Manage platform performance	1. The system shall display total registered clients and decorators with growth trends. 2. The system shall display total requirements posted over selected time periods.	Provides comprehensive insights for platform optimization

				3. The system shall display revenue from transaction fees. 4. The system shall display average decorator ratings across platform.	
4.3.7	Support Management	4.3.7.1	Manage Support Tickets	1. The system shall allow assigning tickets to specific admins or support staff. 2. The system shall enable updating ticket priority and status. 3. The system shall provide ticket response interface for communicating with requestor. 4. The system shall allow marking tickets as resolved with resolution summary. 5. The system shall display total tickets received over time periods.	Solve the problems faced by user
4.3.8	Security and Audit	4.3.8.1	Manage Activity Logs	1. The system shall maintain detailed audit logs of all critical admin actions including approvals, suspensions, deletions, and configuration changes.	Keeps platform safe.

	Security and Audit		Manage Activity Logs	2. The system shall record log details including user ID, action type, timestamp, IP address, and affected resource. 3. The system shall detect and flag suspicious activity patterns such as multiple accounts originating from the same IP address, abnormal posting frequency, or repetitive spam-like quotations. 4. The system shall generate alerts for detected suspicious activities for administrative review. 5. The system shall ensure audit logs are tamper-proof and accessible only to authorized administrators.	
--	--------------------	--	----------------------	--	--

4.4 Non-Functional Requirements

4.4.1 Performance

- The system should support at least 3,000 concurrent users without noticeable delay.
- Pages such as event listings, requirements, and quotations should load within 3 seconds under normal conditions.
- Quotation submission and selection processes should complete within 5 seconds.

4.4.2 Scalability

- The system should be able to grow smoothly as the number of users, decorators, and event requests increases..
- The database should handle a large number of requirements, quotations, and reviews without major structural changes.

4.4.3 Availability & Reliability

- The system should be available at least 99.5% of the time.
- If the system fails, it should recover automatically within 5 minutes.
- All data should be backed up every day, and backups should be restorable within 1 hour.

4.4.4 Security

- The system should implement role-based access control for Users, Decorators, and Admins.
- Passwords should be stored securely using strong encryption
- Admin and Decorator accounts should use multi-factor authentication.
- Important activities should be logged for audits.

4.4.5 Usability

- The system should work well on computers and mobile devices.
- Users should be able to complete tasks such as registration, requirement posting, quotation review, and selection easily.
- Clear instructions, messages, and prompts should guide users during important actions.

4.4.6 Backup & Disaster Recovery

- Critical data should be backed up to cloud storage daily.
- The system should have a plan to restore service within 2 hours in case of a major failure

4.5 System Interface

1. Web Application Interface

- Responsive web-based interface accessible via modern browsers (Chrome, Firefox, Safari, Edge)
- Separate dashboards for Clients, Decorators, and Admins with role-specific navigation
- Mobile-optimized design supporting smartphones and tablets (320px to 1920px screen widths)
- Bilingual support: English and Bengali language options

2. Hardware Interface

- Desktop computers, laptops, tablets, and smartphones with internet connectivity
- Minimum screen resolution: 320x568 pixels (mobile) to 1920x1080 pixels (desktop)
- Camera access for uploading portfolio images and reference photos

4.6 Project Requirements:

Analysis with COCOMO Model

- Project Type: ORGANIC
- Source Lines of Code (SLOC): 28,000 estimated

COCOMO CALCULATION

- $\text{Effort} = \text{PM} = 2.4 \times \left(\frac{28000}{1000}\right)^{1.05}$
 $= 79.38 \text{ person-months}$
- $\text{Development time} = \text{DM} = 2.50 \times (71.73)^{0.38}$
 $= 13.18 \text{ Months} \approx 14 \text{ months}$
- $\text{Required number of people} = \text{ST} = \frac{71.73}{12.73}$
 $= 6.02 \approx 7 \text{ Persons}$

For testing, around 25% time of the whole cycle might be invested in the testing phase. Therefore, the total time to test the web will take as follows:

$$\begin{aligned}\text{Testing Time} &= \text{Total Development Time (in Months)} \times \text{Testing Time (in Percentage)} \\ &= 14 \text{ months} \times 25\% \\ &= 3.5 \approx 4 \text{ months}\end{aligned}$$

Personnel Requirements :

Role	Member
Project Manager/Team Lead	1
Senior Full Stack Developer	1
Frontend Developer	1
Backend Developer	1
UI/UX Designer	1
QA Lead	1
QA Engineer	2
Database Engineer	1
Maintenance & Support Engineer	1
Total Personnel	10

Technology Stack :

Frontend Technologies

- HTML5, CSS3, JavaScript (ES6+)
- Frontend Framework: React.js or Vue.js
- CSS Framework: Bootstrap 5 or Tailwind CSS
- State Management: Redux or Vuex
- HTTP Client: Axios

Backend Technologies

- Programming Language: PHP 8.x (Laravel) or Python 3.x (Django/Flask)
- Web Server: Apache 2.4+ or Nginx 1.18+
- API Architecture: RESTful API with JWT authentication

Database and Storage

- Primary Database: MySQL 8.0+
- Cache Layer: Redis 6.0+ for session and data caching
- File Storage: Cloud object storage (AWS S3, DigitalOcean Spaces)

Development and Deployment Tools

- Version Control: Git with GitHub

- Containerization: Docker for environment consistency
- CI/CD: Jenkins, GitLab CI
- Cloud Hosting: AWS, DigitalOcean

Infrastructure Requirements

Development Environment

- Developer workstations: Intel Core i5/AMD Ryzen 5, 16GB RAM, 512GB SSD
- Local development servers for testing

Production Environment (Initial Deployment)

- Web Application Server: 4 vCPU cores, 8GB RAM, 100GB SSD, 2TB bandwidth/month
- Database Server: 2 vCPU cores, 4GB RAM, 50GB SSD with automated backups
- Redis Cache Server: 1 vCPU core, 2GB RAM, 10GB SSD
- File Storage: 100GB cloud object storage (expandable)
- Backup Storage: 200GB for automated daily backups (30-day retention)

Network and Security

- SSL/TLS certificate for HTTPS encryption
- Registered domain name (.com.bd or .com)
- CDN (Content Delivery Network) for static assets
- Cloud-based firewall and DDoS protection

5. FEATURES NOT TO BE TESTED

The following features are outside the scope of the current testing phase. These items are excluded due to external dependencies, limited project timeline, or planned future enhancements:

- Integration testing of third-party services such as payment gateways, SMS, and email providers.
- System performance validation under extreme load, stress, or failure scenarios.
- Operating system file systems and memory management.
- DBMS log management and recovery mechanisms.
- Functionalities planned for future releases that are not part of the current system version
- Manual administrative decisions and business rules that cannot be validated through software testing.

6. TESTING APPROACH

6.1 Testing Levels

Unit Testing : Individual components and modules will be tested in isolation to verify correct functionality.

Integration Testing : Integrated modules will be tested together to ensure proper data flow and interaction between components.

System Testing : The complete system will be tested as a whole to validate functional requirements, including workflows for clients, decorators, and administrators.

Load and Performance Testing : The system will be tested under expected and peak user loads to measure response times, stability, and scalability.

Security Testing : Authentication, authorization, data encryption, and access control mechanisms will be tested to ensure data protection and system security.

User Acceptance Testing (UAT) : Selected end-users will verify that the system meets business requirements and is ready for deployment.

6.2 Test Tools

Manual Testing: Used for functional, integration, system, load, security, and acceptance testing through structured test case execution.

Postman: Used for testing REST APIs, backend services, and integration with payment or notification systems.

Selenium: Used to automate repetitive UI test cases such as registration, requirement posting, quotation submission, and login flows.

JMeter: Used for load and performance testing to measure response times under concurrent user conditions.

OWASP ZAP: Used for basic security testing, including vulnerability scanning and authentication checks.

JIRA: Used to log, track, assign, and manage defects throughout the testing lifecycle.

6.3 Meetings

Test Planning Meeting : Define testing objectives, strategy, timeline, resources, and deliverables; establish entry/exit criteria for testing phases.

Daily Stand-up Meeting : Share daily testing progress, identify blockers, discuss critical bugs, and maintain team alignment.

Test Case Review Meeting : Review test cases for completeness and accuracy, verify alignment with requirements, ensure adequate coverage, and approve test cases for execution.

Bug Triage Meeting : Review newly reported bugs, assign severity and priority, allocate bugs to developers, discuss complex issues, and make decisions on bug deferment

Test Progress Review Meeting : Review test execution progress, present test metrics and defect trends, assess schedule adherence, make go/no-go decisions, and address testing risks.

7. TEST CASES / TEST ITEMS

Test Case 1: Client Registration- Valid Fields

Project Name: EventDecor		Test Designed by: MD, AHASAN HABIB ALIF		
Test Case ID: TC-CLI-REG-01		Test Designed date: 07-05-2026		
Test Priority (Low, Medium, High): High		Test Executed by: MD, AHASAN HABIB ALIF		
Module Name: Client Account Management		Test Execution date:		
Test Title: Verify client registration with valid data				
Description: Verify that a new client can successfully register using valid input data and receive OTP verification.				
Precondition (If any): User is not registered and is on the registration page.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Enter full name 2. Enter email, phone 3. Enter password 4. Re-enter password 5. Enter location 6. Click Register button 7. Enter received OTP 8. Click Verify	Full Name: Mr. karim Phone: 0104824456 Email: karim@gmail.com Password: karim321 Confirm password : karim321 Location : Dhaka OTP : 534654	Account will be registered.		
Post Condition: Client account is created and verified, user can login successfully.				

Test Case 2: Client Registration - Weak Password

Project Name: EventDecor	Test Designed by: MD, AHASAN HABIB ALIF
Test Case ID: TC-CLI-REG-03	Test Designed date: 07-05-2026
Test Priority (Low, Medium, High): HIGH	Test Executed by:
Module Name: Client Account Management	Test Execution date:
Test Title: Prevent registration with weak password	
Description: Verify system enforces password strength policy.	
Precondition (If any): User is on registration page.	

Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Enter valid email 2. Enter weak password 3. Click Register button	Email: karim@gmail.com Password: 123	User sees validation error: "Password too weak"		
Post Condition: Registration is not completed.				

Test Case 3: Client Registration -Resend OTP				
Project Name: EventDecor		Test Designed by: MD, AHASAN HABIB ALIF		
Test Case ID: TC-OTP-RESEND-01		Test Designed date: 07-05-2026		
Test Priority (Low, Medium, High): HIGH		Test Executed by:		
Module Name: Client Account Management		Test Execution date:		
Test Title: Verify resend OTP functionality for client account verification				
Description: Verify that a user can request a new OTP when the previous OTP expires or is not received.				
Precondition (If any): User has initiated registration or login requiring OTP verification.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Goto Registration page 2. fill up input field 3. Click submit button 4. Click on "Resend OTP" button	N/A	A new OTP is generated and sent to the registered email/phone number.		
Post Condition: Previous OTP is invalidated and only the latest OTP is considered valid.				

Test Case 4: Client Registration - Existing Email

Project Name: EventDecor		Test Designed by: MD, AHASAN HABIB ALIF		
Test Case ID: TC-CLI-REG-02		Test Designed date: 07-05-2026		
Test Priority (Low, Medium, High): HIGH		Test Executed by:		
Module Name: Client Account Management		Test Execution date:		
Test Title: Prevent registration using already registered email				
Description: Verify system blocks duplicate email registration.				
Precondition (If any): Email already exists in system.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Open registration page 2. Enter existing email 3. Click Register button	Email: karim@gmail.com	System shows error message: "Email already exists"		
Post Condition: No new account is created.				

Test Case 5: Client Login

Project Name: EventDecor		Test Designed by: MD, AHASAN HABIB ALIF		
Test Case ID: TC-CLI-LOGIN-01		Test Designed date: 07-05-2026		
Test Priority (Low, Medium, High): High		Test Executed by:		
Module Name: Client Account Management		Test Execution date:		
Test Title: Verify login with valid credentials				
Description: Verify that a registered client can successfully login using valid email/phone and password..				
Precondition (If any): Client account already exists and is verified..				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Enter email or phone 2. Enter password 3. Click Login button	Username: karim@gmail.com Password: karim321	User will be successfully logged in to the application.		

Post Condition: User session created and login recorded with Welcome message displayed.				
Test Case 6: Client Login - Invalid Password				
Project Name: EventDecor		Test Designed by: MD, AHASAN HABIB ALIF		
Test Case ID: TC-CLI-LOGIN-02		Test Designed date: 07-05-2026		
Test Priority (Low, Medium, High): Medium		Test Executed by:		
Module Name: Client Account Management		Test Execution date:		
Test Title: prevent client login with invalid password				
Description: Verify that login fails with appropriate error message when incorrect password is entered.				
Precondition (If any): User is registered with email				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Enter valid email or phone number 2. Enter wrong password 3. Click login button	Email: karim@gmail.com Password: wrong2	An error message will be displayed: 'Invalid email or password,'		
Post Condition: User is not logged in, user will remain on the same page, account remains secure.				
Test Case 7: Client Login - Empty Fields				
Project Name: EventDecor		Test Designed by: MD, AHASAN HABIB ALIF		
Test Case ID: TC-CLI-LOGIN-05		Test Designed date: 07-05-2026		
Test Priority (Low, Medium, High): HIGH		Test Executed by:		
Module Name: Client Account Management		Test Execution date:		
Test Title: Validate login form with empty inputs				
Description: Verify system does not allow login with empty email or password fields.				
Precondition (If any): User is on login page.				

Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Leave email empty 2. Leave password empty 3. Click Login button	Email: '' Password: ''	System shows validation message: "Fields cannot be empty".		
Post Condition: User remains on login page.				

Test Case 8: Password Reset Functionality

Project Name: EventDecor		Test Designed by: MD, AHASAN HABIB ALIF		
Test Case ID: TC-CLI-RESET-01		Test Designed date: 07-05-2026		
Test Priority (Low, Medium, High): High		Test Executed by:		
Module Name: Client Account Management		Test Execution date:		
Test Title: Verify password reset using registered email				
Description: Verify that a user can successfully reset their password using a registered email address.				
Precondition (If any): Client account exists, email is registered and is on the login page.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Click “Forgot Password” 2. Submit email 3. Submit received OTP 4. Set new password	Email : karim@gmail.com OTP; 396453 New pass : karim1	Password will be updated		
Post Condition: Customer can log in using the new password.				

Test Case 9: Post Requirement

Project Name: EventDecor		Test Designed by: MD, AHASAN HABIB ALIF		
Test Case ID: TC-REQ-POST-01		Test Designed date: 07-05-2026		
Test Priority (Low, Medium, High): High		Test Executed by:		
Module Name: Requirement Management		Test Execution date:		
Test Title: Verify client can post event decoration requirement with all details				

Description: Verify that a logged-in client can successfully create and post a new event decoration requirement.				
Precondition (If any): Client is logged in and on the dashboard.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. click post requirement button 2. select Event Type 3. Enter event date 4. Enter Venue location 5. Enter budget range 6. Enter event details 7. Enter esti. guest count 8. upload reference images(optional) 9.select theme preferences 10. click submit	Event Type: Wedding Event Date: 15-03-2026 Location: Banani, Dhaka Budget: 50,000 - 80,000 BDT Details: Need traditional Bengali wedding stage decoration Guest Count: 300 Theme: Red and Gold	A success message will be displayed successfully, along with a unique requirement ID.		
Post Condition: Requirement is created, stored in database, and visible to all verified decorators.				

Test Case 10: View Posted Requirements

Project Name: EventDecor		Test Designed by: MD, AHASAN HABIB ALIF		
Test Case ID: TC-REQ-VIEW-01		Test Designed date: 08-05-2026		
Test Priority (Low, Medium, High): Medium		Test Executed by:		
Module Name: Requirement Management		Test Execution date:		
Test Title: Verify client can view all their posted requirements				
Description: Verify that client can see list of all requirements they have posted with status information.				
Precondition (If any): Client is logged in and has posted at least one requirement.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Login as client 2. Navigate to "My Requirements" section 3. View requirement list	N/A	All posted requirements will be displayed with their details.		
Post Condition: Client can see overview of all their requirements.				

Test Case 11: Decorator Registration

Project Name: EventDecor		Test Designed by: MD, AHASAN HABIB ALIF		
Test Case ID: TC-DEC-REG-01		Test Designed date: 08-05-2026		
Test Priority (Low, Medium, High): High		Test Executed by:		
Module Name: Decorator Account Management		Test Execution date:		
Test Title: Verify decorator registration with document upload				
Description: Verify that a new decorator can register and submit verification documents successfully.				
Precondition (If any): User is on decorator registration page.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Enter Business Name 2. Enter owner name 3. Enter email and phone 4. Enter password 5. select service area 6. upload TIN certificate 7. upload owner NID 8. upload portfolio samples (3-5 images) 9. click Register	Elegant Events BD Rahim Hossain rahim@yahoo.com 01012345678 rim@456 Dhaka, Gazipur trade_license.pdf, nid.jpg, portfolio1.jpg	A success message will be displayed.		
Post Condition: Decorator account created with pending verification status, admin notified for verification.				

Test Case 12: Decorator Browse Requirements

Project Name: EventDecor	Test Designed by: MD, AHASAN HABIB ALIF
Test Case ID: TC-DEC-BROWSE-01	Test Designed date: 08-05-2026
Test Priority (Low, Medium, High): High	Test Executed by:
Module Name: Requirement Discovery	Test Execution date:
Test Title: Verify verified decorator can browse posted requirements	
Description: Verify that a verified decorator can view all active client requirements.	
Precondition (If any): Decorator is logged in with verified status, and active requirements	

Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Login as verified decorator 2. Navigate to “browse Requirements” section 3. view requirement list	N/A	All active requirements will be displayed with all their details.		
Post Condition: Decorator can see all available opportunities..				
Test Case 13: Submit Quotation				
Project Name: EventDecor			Test Designed by: MD, AHASAN HABIB ALIF	
Test Case ID: TC-QUOT-SUB-01			Test Designed date: 08-05-2026	
Test Priority (Low, Medium, High): High			Test Executed by:	
Module Name: Quotation Management			Test Execution date:	
Test Title: verify decorator can submit detailed quotation for a requirement				
Description: Verify that decorator can create and submit a complete quotation with pricing breakdown..				
Precondition (If any): Decorator is logged in and viewing a specific requirement.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. cliick on a requirement 2. Click "Submit Quotation" button 3. Add line items with prices 4. Add service description 5. Set quotation validity 6. Add terms and conditions 7. Add personal message 8. Click Submit	Stage decoration: 30,000 BDT Lighting: 15,000 BDT Floral arrangement: 20,000 BDT Validity: 15 days Message: "We specialize in traditional Bengali weddings"	A success message will be displayed with a unique quotation ID.		
Post Condition: The total will be calculated automatically Quotation submitted, stored in database, visible to client, decorator cannot edit after client views it.				

Test Case 14: View and Compare Quotations

Project Name: EventDecor		Test Designed by: MD. IBTIHAZZAMAN		
Test Case ID: TC-QUOT-COMPARE-01		Test Designed date: 08-05-2026		
Test Priority (Low, Medium, High): Medium		Test Executed by:		
Module Name: Quotation Management		Test Execution date:		
Test Title: Verify client can view and compare multiple quotations side-by-side				
Description: Verify that client can see all received quotations and compare them in a comparison view.				
Precondition (If any): Client is logged in, requirement posted, at least 2 quotations received.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Login as Client 2. Navigate to specific requirement 3. View quotation list 4. Select more than 2 quotation 5. Click “compare” button	N/A	All quotations for the requirement will be displayed side by side, showing the details of the decorator and their offers.		
Post Condition: Client can make informed decision based on comparison.				

Test Case 15: Select Decorator

Project Name: EventDecor	Test Designed by: MD. IBTIHAZZAMAN
Test Case ID: TC-DEC-SELECT-01	Test Designed date: 08-05-2026
Test Priority (Low, Medium, High): High	Test Executed by:
Module Name: Quotation Management	Test Execution date:
Test Title: Verify client can select a decorator from quotations	
Description: Verify that client can select a preferred quotation and confirm booking.	
Precondition (If any): Client is logged in, viewing quotations for their requirement.	

Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. View quotation details 2. Click "Select This Decorator" button 3. Review booking confirmation 4. Click "Confirm Selection"	N/A	A success message will be displayed with the booking details.		
Post Condition: Decorator selected, both parties can communicate, requirement closed to other decorators.				

Test Case 15: Send Message				
Project Name: EventDecor		Test Designed by: MD. IBTIHAZZAMAN		
Test Case ID: TC-MSG-SEND-01		Test Designed date: 08-05-2026		
Test Priority (Low, Medium, High): Medium		Test Executed by:		
Module Name: Communication		Test Execution date:		
Test Title: Verify client can send message to decorator about quotation				
Description: Verify that client can communicate with decorator who submitted quotation.				
Precondition (If any): Client is logged in, decorator has submitted quotation for client's requirement.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. View quotation 2. Click “message decorator” button 3. Type message 4. Click send button	Message ; Can you provide references from previous wedding decorations?	The message will be sent successfully.		
Post Condition: Message delivered, conversation history maintained in thread, decorator can reply.				

Test Case 16: Submit Review and Rating

Project Name: EventDecor		Test Designed by: MD. IBTIHAZZAMAN		
Test Case ID: TC-REVIEW-SUB-01		Test Designed date: 09-05-2026		
Test Priority (Low, Medium, High): Medium		Test Executed by:		
Module Name: Reviews and Ratings		Test Execution date:		
Test Title: Verify client can submit review for decorator after service				
Description: Verify that client can rate and review decorator after completing a booking.				
Precondition (If any): Client is logged in, has completed booking with decorator.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Navigate to completed bookings. 2. Click write review 3. Select star rating 4. Rate specific criteria 5. Write review text 6. Upload photos (optional) 7. Click submit button	Overall Rating: 5 stars Quality:5/5 Professionalism: 5/5 Timeliness:4/5 Value:5/5 Review:"Excellent work!_Very professional team" Photos: decorated_venue.jpg	The review will appear on the decorator’s profile.		
Post Condition: Review published on decorator profile with changed rating, visible to all users, decorator can respond.				

Test Case 17: Admin Verify Decorator

Project Name: EventDecor	Test Designed by: MD. IBTIAZZAMAN
Test Case ID: TC-ADMIN-VERIFY-01	Test Designed date: 09-05-2026
Test Priority (Low, Medium, High): High	Test Executed by:
Module Name: User Moderation	Test Execution date:
Test Title: Verify admin can review and approve decorator application	
Description: Verify that admin can review decorator documents and grant verified status.	
Precondition (If any): Admin is logged in, decorator application with "Pending Verification" status exists.	

Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Navigate to “verification Queue” 2. select pending application 3. review details 4. download and verify documents 5. check portfolio samples 6. click approve or reject button 7. add verification notes	verification Notes: "All documents verified. Business registered."	A success message will be displayed.		
Post Condition: Decorator approved, status is changed and can access all platform features, visible to clients as verified.				

Test Case 18: Admin Manage Requirements				
Project Name: EventDecor			Test Designed by: MD. IBTIHAZZAMAN	
Test Case ID: TC-PAY-FAIL-01			Test Designed date: 09-05-2026	
Test Priority (Low, Medium, High): Medium			Test Executed by:	
Module Name: Content Moderation			Test Execution date:	
Test Title: Verify admin can review and remove inappropriate requirement				
Description: verify that admin can moderate posted requirements and remove policy violations.				
Precondition (If any): Admin is logged in, requirement with inappropriate content exists or is flagged.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Navigate to “content Moderation” 2. view flagged requirement 3. review requirement details 4. click “Remove Requirement” 5. select removal reason 6. add admin notes 7. confirm removal	Removal Reason: "Inappropriate content" Notes: "Contains offensive language"	The requirement will no longer be visible to decorators.		
Post Condition: Inappropriate content removed, user warned, action logged for accountability.				

Test Case 19: Admin Manage Complaints

Project Name: EventDecor		Test Designed by: MD. IBTIHAZZAMAN		
Test Case ID: TC-ADMIN-COMP-01		Test Designed date: 09-05-2026		
Test Priority (Low, Medium, High): High		Test Executed by:		
Module Name: Complaint and Dispute Resolution		Test Execution date:		
Test Title: Verify admin can investigate and resolve user complaint				
Description: Verify that admin can review complaint, investigate evidence, and make resolution decision.				
Precondition (If any): Admin is logged in, complaint filed by client against decorator.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Navigate to “Complaints” 2. Select pending Complaints 3. Review complaints details, conversation 4. Contact with both parties 5. Select resolution action 6. Add Solution note 7. Close Complaint	Complaint: "Decorator did not deliver as quoted" Resolution: Warning to decorator Notes: "First offense, warned to maintain service quality"	The action will be executed successfully.		
Post Condition: Complaint resolved, parties notified, resolution documented, enforcement action taken, and the complaint’s status will be changed.				

Test Case 20: Search and Filter Requirements

Project Name: EventDecor	Test Designed by: MD. IBTIHAZZAMAN
Test Case ID: TC-SEARCH-REQ-01	Test Designed date: 10-05-2026
Test Priority (Low, Medium, High): High	Test Executed by:
Module Name: Requirement Discovery	Test Execution date:
Test Title: Verify decorator can search and filter requirements by criteria	
Description: Verify that decorator can use search and filters to find relevant requirements.	
Precondition (If any): Decorator is logged in, multiple requirements exist with different attributes.	

Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Navigate to "Browse Requirements" 2. Apply event type filter 3. Apply location filter 4. Apply budget range filter 5. Apply date range filter 6. View filtered results	Event Type: Wedding Location: Dhaka Budget: 50,000-100,000 BDT Date: August 2026	Only matching requirements will be shown.		
Post Condition: Decorator sees only relevant requirements matching their criteria and expertise.				

Test Case 21: Upload Portfolio Images

Project Name: EventDecor		Test Designed by: MD. IBTIHAZZAMAN		
Test Case ID: TC-PORTFOLIO-SET-01		Test Designed date: 10-05-2026		
Test Priority (Low, Medium, High): Medium		Test Executed by:		
Module Name: Setup portfolio		Test Execution date:		
Test Title: Verify decorator can upload a project image with valid format, size, and details				
Description: Verify that the system allows decorators to upload a portfolio image with valid format and size and saves the image with correct category and details.				
Precondition (If any): User is logged in as artisan and is on the add product page.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Click on the "Upload Image" button. 2. Select a JPEG or PNG image 3. Choose an event category 4. Enter a caption and project description. 5. Click on the "Submit" button.	Image format: JPEG Image size: 4MB Event type: Wedding Caption: Premium Wedding Decor Description: Complete stage and floral decoration	The system will successfully upload the details and automatically create a thumbnail.		
Post Condition: The image is saved in the portfolio and visible in the gallery with correct details and thumbnail.				

Test Case 22: View Platform Performance

Project Name: EventDecor		Test Designed by: MD. IBTIAZZAMAN		
Test Case ID: TC-ANALYTICS-01		Test Designed date: 10-05-2026		
Test Priority (Low, Medium, High): Low		Test Executed by:		
Module Name: Platform Analytics		Test Execution date:		
Test Title: Verify display of platform performance metrics on admin dashboard				
Description: Verify that the admin can view key platform performance metrics on the dashboard.				
Precondition (If any): Admin logged in and platform contains existing all details.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Perform action 2. Navigate to the “Manage Platform Performance” 3. View total registered clients and decorators with growth trends. 4. Select a time period for requirements analysis. 5. View total requirements posted for the selected period. 6. Check displayed revenue from transaction fees. 7. View the average decorator ratings across the platform.	Time period: Last 30 days	The system will display the correct user statistics, requirements count, transaction revenue, and average decorator ratings.		
Post Condition: Platform performance data remains unchanged and is successfully viewed by the admin.				

Test Case 23: Admin Monitor Activity Logs

Project Name: EventDecor		Test Designed by: MD. IBTIAZZAMAN		
Test Case ID: TC-ADMIN-ACT-01		Test Designed date: 10-05-2026		
Test Priority (Low, Medium, High): High		Test Executed by:		

Module Name: Security and Audit			Test Execution date:	
Test Title: Verify logging of critical admin actions and detection of suspicious activities				
Description: Verify that the system records critical admin actions and flags suspicious activity patterns.				
Precondition (If any): User is logged in as admin, is on the review page and review exists				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Navigate to the “Activity Logs” 2. Review the recorded log entry. 3. Trigger suspicious behavior 4. Check the system for flagged suspicious activity.	Admin action: User suspension Suspicious pattern: Multiple access	The system will record all critical admin actions with proper details.		
Post Condition: Activity logs are updated and suspicious activities remain flagged for further action.				

8. ITEM PASS / FAIL CRITERIA

Pass Criteria

- All critical and high-priority functional requirements implemented and working correctly .
- 95% or more of test cases pass successfully.
- All core user workflows (registration, login, requirement posting, quotation submission, decorator selection, review submission) function as specified.
- Zero critical and high severity bugs remaining.
- API response time ≤ 2 seconds for standard operations.
- Database queries execute within 2 seconds.
- No critical or high severity security vulnerabilities.
- Security testing passed (OWASP ZAP scan clear).
- UAT completion rate: 100% of test scenarios executed.
- All UAT critical issues resolved.

Fail Criteria

- Any critical severity bug remains unresolved
- System crashes or becomes completely unavailable during testing
- Data loss or corruption occurs
- Security breach or critical vulnerability identified and not fixed
- Any core workflow fails to function (cannot register, cannot post requirement, cannot submit quotation, cannot select decorator)
- Critical business logic errors (incorrect calculations, wrong data displayed)
- Critical UI elements not accessible on major platforms

9. TEST DELIVERABLES

- Test Plan Document
- Test Cases & Test Scripts
- Defect Reports
- Test Execution Reports
- Test Summary Report
- UAT Test Report
- Test Closure Report.

10. STAFFING AND TRAINING NEEDS

10.1 QA STAFF

Role	Count	Responsibility
Senior QA / QA Lead	1	Test planning, coordination, Lead-level execution and reviews
QA Engineer	2	Full-stack testing, Automation testing

- Developers assist during unit testing.

10.2 TRAINING

Technical Skill Development

Selenium Test Automation: 2-day intensive workshop covering WebDriver, Page Object Model, framework design.

JMeter Performance Testing: 1-day practical training on load testing, metrics analysis, bottleneck identification.

OWASP Security Testing: Half-day certification workshop on vulnerability assessment and penetration testing fundamentals.

Unit Testing Excellence: Half-day session on TDD(Test-Driven Development) practices, mocking, code coverage optimization.

UAT Facilitation: 1.5-hour orientation covering system functionality, test scenario execution, feedback mechanisms

11. RESPONSIBILITIES

Role	Responsibility
QA Lead	Review, Develop and maintain test plan and test strategy, Monitor test execution progress.
QA Tester	Create detailed test cases based on requirements, Execute manual and automated test cases, Report and track defects in Jira, prepare execution report.
Developers	Execute unit tests, Fix assigned bugs, Support integration testing efforts, Provide technical assistance to QA team.
Project Manager	Manage overall project coordination, Stakeholder communication and reporting, review major testing decisions, risk management

12. TESTING SCHEDULE

Figure : Testing Schedule Plan Made for ‘EventDecor’ on Jira.

13. PLANNING RISKS AND CONTINGENCIES

Risk ID	Risk Description	Impact	Mitigation / Contingency Plan
R1	Late delivery of features from development team	High	Track development progress weekly; conduct parallel testing of completed modules
R2	Third-party service failures (SMS, email, storage)	High	Test integrations early; implement fallback mechanisms
R3	security vulnerabilities found	Critical	Implement security best practices early; conduct security testing
R4	Browser/device compatibility issues	Medium	Test on target browsers/devices early; use responsive design frameworks
R5	Requirement changes during testing phase	High	Implement strict change control; defer non-critical changes to post-launch

R6	Automated test script failures due to UI changes	Medium	Design maintainable automation scripts; maintain manual test cases as backup
R7	Poor UAT participation or low user engagement	Medium	Identify UAT participants early; provide incentives and clear expectations
R8	unrealistic test data	Medium	Prepare diverse test data sets early; use production-like data volumes

14.APPROVALS

Name	Designation	Signature	Date
Nafim Ahmed	Project Manager		
Abu bakar Siddique	QA Lead		
Rezowan Rahman	Development Team Lead		
Muhfasul Alam	Project Sponsor		
Redwanul Islam	Business Analyst		
Tamim Rahman	Client Representative		

Revision History:

Revision	Date	Updated by	Update Comments
V0.1	15/02/2026	Md. Ahasan Habib Alif	Major requirement update.
V0.2	21/02/2026	Md. Ibtihaazaman	Added testing approach, test levels, tools, and schedule details
V0.3	25/02/2026	Md. Ahasan Habib Alif	Update Pass/Fail criteria, Test case
V0.4	28/02/2026	Md. Ibtihaazaman	Change in risk List

Meeting 1

Date : 03-05-2026

Time :

Place : Mir Info Systems Limited Office

Meeting notes :
